LIGHTING COMPONENT SPECIALISTS

Suspension Systems

A.L.P. Europe, The Ability to Serve, The Knowledge to Advise, The Ingenuity to Innovate

A.L.P. Europe is pleased to introduce the latest technologies for ceiling suspension of lighting fixtures. Changing regulation and design preference has increased the demand for suspended luminaires. A good flexible suspension kit, with a simple and effective method of changing luminaire height and leveling, addresses these preferences.

We have co-developed a range of systems that will meet lighting manufacturers' current requirements, as well as innovation requirements for the next generation of fixture designs.

Most importantly, the complete assembly is available from one source, eliminating the need to procure grippers from one company, suspension wire from another, ceiling attachment from another, and so on. We also tried to ensure that the existing products in the market could be easily replaced with the A.L.P. Europe Suspension System. Rather than supplement an existing product, it was essential that our system meets the requirements of the next generation of fixtures and provides enhanced functionality. Clearly, the other key design initiative was to ensure value for money and long-lasting quality.

A.L.P. Europe's knowledge and engineering excellence, combined with patented gripper system technology, has exceeded our design goals and aspirations.

Ceiling Attachment

This attachment provides a firm anchor for the suspension system wire to locate onto the ceiling. In the standard configuration, the attachment barrel is screwed onto the ceiling, and the suspension wire is threaded through the collar-locking nut, with the nipple at the end of the suspension wire locating into the collar, which is then screwed into the barrel.

Cable System

A variety of cable length and diameter options are available and should be discussed with your technical representative to ensure fitness for purpose and suitability of gripper choice.

Kitting Options

It is our strong recommendation that the complete solution is purchased from A.L.P. suitably packed, bar coded and labelled as per your specific design criteria. Systems can be provided and packed as single suspension wires, gripper and ceiling attachment or as a kit for direct supply with the complete luminaire. It is supplied as a kit without the need for additional assembly and modification when it is delivered to your facility.

Area of Use

Replacement, Retrofit, Computer Task Areas, General Office, Display Lighting, Under Counter Retail Lighting

Grippers

The gripper provides the mechanism for raising and lowering the luminaire on the suspension wire.

Hidden Profile

Gripper is secured into the luminaire and not visible

Visible Profile Side Exit

Gripper is secured into the luminaire, forms part of the luminaire profiling and the suspension cable extends from the side of the gripper not into the cavity inside the luminaire

Visible Profile Bottom Exit

Gripper is secured into the luminaire, forms part of the luminaire profiling and the suspension cable extends into the cavity inside the luminaire

Y Section Self Leveling

The Gripper is positioned on a single suspension wire, and has a separate Y section connected to the gripper and the luminaire. This enables the raising and lowering of the luminaire, simply and effectively with self leveling.

A.L.P. Europe Ltd, founded as a UK Ltd Company in July 2000, has quickly grown from being the European sales and distribution subsidiary of A.L.P. Lighting Components Inc., to becoming an integral part of the A.L.P. Corporate global operation, responsible for the commercial, sales and operational activity of the European, Middle East, Far East, African and Australasian markets.

As the global leader in the manufacture and distribution of lighting components, A.L.P. offer a diverse range of products for the lighting OEM. Supported by A.L.P.'s manufacturing sites in the USA and Mexico, A.L.P. Europe have dovetailed manufacturing experience and expertise with the requirements of local markets, ensuring at all times that the clients' needs are always fully understood.

Key to our strategic development is making the OEM product line available in the local market and ensuring lead times are kept to an absolute minimum. A.L.P. has now established, in addition to our local distributors, in-depth stocking centres in Melbourne, Singapore, Johannesburg, Dubai and Copenhagen.

It is clear that to maintain our position as the global leader we must continue to develop new products, ensure the products are available locally through clear uncomplicated supply management and continue to listen to the local market as well as take into consideration the global picture.
